

HEAT EXCHANGER MODULE

5

ABSTRACT OF THE DISCLOSURE

10 Brackets 3 made of resin are provided between the radiator 1 and the condenser 2, and the heat exchangers 1 and 2 are secured to the brackets 3, so that heat transfer from the radiator 1 to the condenser 2 can be restricted and reduction of the cooling efficiency of the condenser 2 can be prevented. The radiator 1 and the condenser 2 are assembled with and secured to the
15 brackets 3 so that the position of the condenser 2 with respect to the radiator 1 can be easily determined. Therefore, the assembling of the cooling module can be facilitated and no heat exchange between the radiator 1 and the condenser 2 can be restricted due to a
20 predetermined space provided between the core 1c of the radiator 1 and the core 2c of the condenser 2.
